

CLC Technology's core software, the Collaborative Network application, is available as an application delivery platform for your business. We can integrate your custom static content into the CN application and optionally deliver your data into our web application through a 'your database to our database' synchronization process. We can customize the user interface for your application and scale the Collaborative Network architecture to meet many challenging demands.

Many types of businesses would benefit from the short turn around time to deployment and the low cost of operating the user-self-service Application Platform.

- Divisions of large corporations needing a low-cost, user-self-service web application for launching new web applications.
- Entrepreneurs and startups wanting to expand their initial footprint with sales prospects without long and costly software development process.
- Small business owners who do not have the resources to build software but have a market need to sell or deliver services over the web.

The Application Platform has a powerful suite of communication tools and document management features when combined with your custom content provides a low cost and highly scalable solution for moving your business forward quickly.

CLC Technology's Application Platform is a hosted web application that requires only a web browser and internet access to use. Your users can use the easy point-and-click interface without any training and CLC Technology optionally can provide all your support.

APPLICATION PLATFORM ADVANTAGES

RBAC Security

Access into the Application Platform is through our layered and compartmentalized security architecture within the web application and by Role Based Access Control where you make the initial decision for who sees what. Working with our security engineers during initial setup we guide you through the process of our state of the art web application security.

Administrative Overview

Account Holders can appoint different levels of Administrators to perform high level tasks governing access rights, reporting, content creation and site customization. Traditionally CLC Technology works with your appointed administrators to create the application deployment platform that meets your requirements while sharing some of that responsibility.

Rapid Deployment

Depending upon your requirements, within a few days custom modules of your static data can be placed on your customized site and you can begin deployment to your users using our default tool set. We can incorporate into the web application third party developer built custom application modules, custom online forms, and a host of other unique features.

Brand Customization

In addition to your logo on every page, including the login page, optional custom page colors can be provided. Working with our design engineers, page layout can be adjusted and custom branded page modules can be created. Additional pages to the application can be added that contain your unique information and brand identity.

Reporting

CLC Technology provides default reporting about the use of their application platform to all Application Platform Account Holders. Available 24/7 through our FTP server our default report does not violate any security rules yet provides you with comprehensive slice and dice data. Optional custom reports are available.

Expandable and Scalable

The Application Platform is expandable to meet many new requirements as your business use grows. Scalable to accommodate an unlimited user base, our software and hardware can meet the toughest user conditions. Architected to allow many types of customizations without lengthy development times, the Application Platform has a low operating cost.

PRODUCT FEATURES

Communication

Both the Discussions and Instant Message features are archived and encrypted for retrieval and security. The Discussion module has robust features not normally found elsewhere. Both the Discussion module and the Instant Message is internal to the system, reserved only for your registered users.

Folders and Files

A complete file and folder management system including drag and drop rearranging. Upload multiple documents simultaneously and manage document versions with our versioning system. No limit on storage space or bandwidth for files of all types.

Directories and Archives

Office Staff directory, Contacts directory, Client directory, full featured Calendar with automatic email notifications of pending events, Resources directory to archive web links. You can request additional tools to be built for the application deployment platform.

Notifications

The Notifications module will keep your users notified when anything changes in any group they may be affiliated with. No more wondering what is going on in all those groups you created. Now you know at a glance when any change is made anywhere.

Goals and Tasks

Based upon your type of business create a to-do list for users, or perhaps set goals with goal dates. When your user marks their goals or tasks as completed you are automatically notified of their success on your home page.

Add Member Process

Enter a users name and email address, click "enter" and we take care of the rest in just seconds. We send your personalized welcome email with their username and password, create their workspace, populate the files you want, and create their record in your directory.

Security

Adjustable security settings for clients and staff with file and folder access fully configurable. We encrypt your data during transmission and in our database. This web application is compliant with HIPAA standards and all state and federal security guidelines.

Essential Tools

Calendars, client and office directories, client billing system, and a Administrator menu to manage your subscription. Use the client calendar to send email reminder notices of events. The client billing system emails and archives the auto-created PDF invoices.

Originally conceived and designed as an application delivery platform CLC Technology's core software, the Collaborative Network application, can be modified and scaled to fit your business needs. With our low operating cost and the user self service application model, even the smallest startup business can afford to use the default Application Platform settings to get started. Larger organizations can work with our design engineers to achieve a robust web application that is designed to scale for large enterprise use.

OUR PROMISE

Whatever client communication problems you are facing,

we will help you solve them.

Whatever your client retention goals are,

we will help you reach them.

Whatever your dreams are for a bigger business in the future,

we will help you build them.
