

Designed exclusively as multi-use software as a service application for enterprise and large organization deployment, our low monthly cost Collaborative Network application is available as an information delivery platform for your business. We can integrate your custom static content into the Collaborative Network application and optionally deliver your data into our web application.

**Add our Process Automation to part of your enterprise or association deployment and you have a sophisticated, low cost solution to automate and deploy your organizations information to vendors, customers, employees and members.**

- Church and non-profit organizations need to expand the personal touch from your organization to your members, congregation and contributors.
- Use it as a platform to grow your outreach program, to bring your message to your members in a personal yet private way and to show your contributors that you are doing something new and dynamic for them.
- Divisions of large corporations needing a low-cost, user-self-service web application for launching new web applications.
- Small business owners who do not have the resources to build software but have a market need to sell or deliver services over the web.

The Collaborative Network application has a powerful suite of communication tools and document management features when combined with your custom content provides a low cost and highly scalable solution for moving your business forward quickly.

CLC Technology's Collaborative Network application is a hosted web application that requires only a web browser and internet access to use. Your users can use the easy point-and-click interface without any training and CLC Technology optionally can provide all your support.

## **COLLABORATIVE NETWORK ADVANTAGES**

### **RBAC Security**

Access into the Collaborative Network is through our layered and compartmentalized security architecture within the web application and by Role Based Access Control where you make the initial decision for who sees what. Working with our security engineers during initial setup we guide you through the process of our state of the art web application security.

### **Administrative Overview**

Account Holders can appoint different levels of Administrators to perform high level tasks governing access rights, reporting, content creation and site customization. Traditionally

### **Rapid Deployment**

Depending upon your requirements, within a few days custom modules of your static data can be placed on your customized site and you can begin deployment to your users using our default tool set. We can incorporate into the web application third party developer built custom application modules, custom online forms, and a host of other unique features.

### **Brand Customization**

We have a lot of custom branding options. In addition to a branded login and your logo on every page optional custom page colors can be provided. Working with our design engineers,

CLC Technology works with your appointed administrators to create the application deployment platform that meets your requirements while sharing some of that responsibility.

### **Reporting**

CLC Technology provides default reporting about the use of their application platform to all Collaborative Network Account Holders. Available 24/7 through our secure FTP servers our default reports do not violate any security rules yet provides your company with comprehensive slice and dice data. Optional custom reports with targeted content are available.

page layout can be adjusted and custom branded page modules can be created. Additional pages to the application can be added that contain your unique information and brand identity.

### **Expandable and Scalable**

The Collaborative Network is expandable to meet many new requirements as your business use grows. Scalable to accommodate an unlimited user base, our software and hardware can meet the toughest user conditions. Architected to allow many types of customizations without lengthy development times, the Collaborative Network has a low operating cost.

## **PRODUCT FEATURES**

### **Communication**

The Discussion module has robust features not normally found elsewhere. Both the Discussion module and the Instant Message is internal to the system, reserved only for your registered users. All user communication is always encrypted.

### **Folders and Files**

A complete file and folder management system including drag and drop rearranging. Upload multiple documents simultaneously and manage document versions with our version system. No limit on storage space or bandwidth.

### **Directories and Archives**

Office Staff directory, Contacts directory, Client directory, full featured Calendar with automatic email notifications of pending events, Resources directory to archive web links. You can request additional tools to be built for the application deployment platform.

### **Security**

Adjustable security settings for clients and staff with file and folder access fully configurable. We encrypt your data during transmission and in our database. This web application is compliant with

### **Notifications**

The Notifications module will keep your users notified when anything changes in any group they may be affiliated with. No more wondering what is going on in all those groups you created. Now you know at a glance when any change is made anywhere.

### **Custom Page Content**

Most businesses want to put some client controlled custom content in front of their users, in a highly selective manner. Our flexible role based access control system allows our clients to be very selective with "who sees what".

### **Add Member Process**

Enter a users name and email address, click "enter" and we take care of the rest in just seconds. We send your personalized welcome email with their username and password, create their workspace, populate the files you want, and create their record in your directory.

### **Essential Tools**

Calendars, client and office directories, client billing system, and a Administrator menu to manage your subscription. Use the client calendar to send email reminder notices of

HIPAA standards and all state and federal security guidelines.

events. The client billing system emails and archives the auto-created PDF invoices.

Originally conceived and designed as an application delivery platform CLC Technology's core software, the Collaborative Network application, can be modified and scaled to fit your business needs. With our low operating cost and the user self service application model, even the smallest startup business can afford to use the default settings to get started. Larger organizations can work with our design engineers to achieve a robust web application that is designed to scale for large enterprise use.
